compost **connect**

You are invited to join the AIP on a virtual tour of Compost Connect

WHAT:

Food production and waste account for 26% of global greenhouse gas emissions and food waste breaking down in landfill emits methane, a greenhouse gas that is 26 times more harmful than CO₂.

Reducing food waste by composting can be an effective strategy to combat global warming by diverting organic waste from landfill.

Last year, BioPak launched Compost Connect, a network to connect foodservice businesses with industrial composters. This ensures that not only food scraps in the hospitality sector are composted, but compostable packaging too.

Join us as we visit industrial composting sites, speak to chefs using the service and gain an understanding of how composting fits into the circular economy.
